@superset-ui/legacy-preset-chart-deckgl

`npm` `v0.20.2`
`dependencies` `1 deprecated`

This plugin provides `deck.gl` for Superset.

Usage

Import the preset and register. This will register all the chart plugins under `deck.gl`.

```
import { DeckGLOSMChartPreset } from '@superset-ui/legacy-preset-chart-deckgl';

new DeckGLOSMChartPreset().register();
```

or register charts one by one. Configure `key`, which can be any `string`, and register the plugin. This `key` will be used to lookup this chart throughout the app.

```
import { ArcChartPlugin } from '@superset-ui/legacy-preset-chart-deckgl';

new ArcChartPlugin().configure({ key: 'deck_osm_arc' }).register();
```

Then use it via `SuperChart`. See storybook for more details.

```
<SuperChart
  chartType="deck_arc"
  width={600}
  height={600}
  formData={...}
  queriesData={[{
    data: {...},
  }]}
/>
```
